DRILLING PROCEDURE

1. Mark wood-base center (datum); draw +X and +Y axes lightly with pencil.
2. Mark every hole position with center punch using the X/Y column values.
3. Pilot-drill all positions with Ø2 mm bit first (prevents wandering).
4. Final-drill each position to its listed Ø (clearance for bolt thread).
5. Use hole saw for the Ø100 take-down opening (centered on datum).
6. Counterbore PSU + Motor holes Ø8 × 2 mm from underside (recess nut).
7. Tolerance ±1.0 mm; dry-fit component before tightening bolts.
8. Apply blue threadlocker on M5 motor bolts (lock washer + threadlock).
